## non-measured pour spouts

### fliptop seal

The Precision Pour® non-measured, fliptop-style pour spouts feature the same high quality materials and superior quality of build as the 3-Ball measured-style spouts. The only difference being that the non-measured spouts are free-flowing; they will not automatically stop pouring like the 3-Ball spouts.

**Precision Pour® fliptop seal spouts protect your liquor inventory against fruit flies and contaminants.**

When your bottles are upright, the closed fliptop prevents anything from entering the bottle. When the bottle is tilted into a pouring position, the hinged fliptop opens smoothly allowing liquor to pass through the spout.

Unlike other manufacturer's spouts, Precision Pour® fliptop seals are an integral part of the spout, not an add-on. The fliptop's mount is molded into the top of the spout and the movable portion of the fliptop is affixed with a metal pin. This means that the Precision Pour® fliptop is the most durable and smoothest operating spout top available.
