

product details  
**measured pour spouts**

## standard style

Precision Pour® standard style spouts are our most cost-effective spouts. The lack of a collar and a flitop seal keeps the purchase price down, but the performance of the spout is undiminished.

Using these spouts, bartenders can reduce over pouring and spills and serve two to four more cocktails per bottle. This means that, in most cases, a Precision Pour® spout will pay for itself in just one bottle. Then, the earnings continue, bottle after bottle, for years to come.

Precision Pour® spouts benefit your customers as well. Customers appreciate the flavor of an accurately poured cocktail and the consistency, one drink to the next that comes from using Precision Pour® spouts.
